

Idalsa - Ibérica de aleaciones ligeras

Green light for the Deslacadora.

Green light for the Deslacadora.

We begin a new cycle in IDALSA, with new efforts to optimize our productive systems and our processes of treatment of controlled residues.

There are introduced the best technologies available of oxicombustión. We have incorporated processes that allow to reduce the power consumptions. We have designed improvements in the pre-cure of the raw materials.

We have surpassed the informative manipulations of our competition and its intermediaries. We have known to respond before the Administration of all the unfounded accusations. The Committee of Company is published an Official notice exposing its perplexity before certain activities of the INAGA and their total support to IDALSA.

The contentious experience in the treatment and resolution of these have fortified our will to continue working.

We want to work and to generate wealth in our surroundings.

Our will of overcoming, in crisis surroundings, demands positions clear to the Public Administrations to be able to suitably evaluate the viability of our company.

Finally the installation of the Deslacadora has been unsealed and so an important uncertainty has been cleared. Other administrative decisions are pending that IDALSA has resorted to make merit their rights. IDALSA counts with new and solid supports to lay the way towards a sustainable recovery.
